

Peshtigo tech education classes prepare students

Special to the EagleHerald

PESHTIGO— Eighth grade students in Peshtigo take two one quarter technology education classes which introduces them to a number of different skills. One class is taught by technology teacher Mike Paquette where he creates design challenges for students to work on in teams.

“The goal is to mimic a business and teach students the problem solving process they need to go through to bring a product to market,” he said.

The class members are faced with a challenge product to create, such as a coin sorter. They research design and do an efficiency study. Students then purchase materials, write purchase orders and checks, and learn to maintain a tight budget. The goal is to complete a finished usable prototype. Eighth grade students also learn about robotics. They learn about circuits, basic electrical systems, and even how to solder. Paquette is not alone in the technology education department. Beth Rocque also teaches a technology education class which focuses on different knowledge and skills.

In Rocque's class, students learn a number of work related skills, including coding javascript, isometric and orthographic sketching, architectural drafting, 3D printing, and woodworking! Coding skills are important because “most factories are humans maintaining machines.” Learning to create and read isometric, orthographic, and architectural sketches are really important in industry and

the trades, educators say.

Three dimensional printing is “huge in the field,” and is very important in engineering and manufacturing. Students also learn some basic woodworking skills and are exposed to tools. The students in the fall classes competed in Brown County Home Builders' Association by building an adirondack chair and bench. “Industry and the trades fields are huge, so we introduce as many exploratory concepts as possible for eighth graders,” Rocque explained.

Recently, students completed a woodworking project she called a “Geometric Wood Epoxy Project.” “After designing their

projects, students had to fit all of their geometric shapes within a specified area, which was challenging at times,” Rocque said. She taught students how to scale their designs. They got to choose from various woods, which included oak, cherry and black walnut with different shades, colors and grains. All of the wood for the projects were donated by Aacer Flooring.

Students learned to operate several tools for the project, such as the band saw, which allowed them to cut wood into geometric shapes. Student Evan Young said, “The tool I found most interesting was the band saw. The speed of how fast the blade spun and how it cut

a perfect line in the wood was pretty cool.”

After sanding the shapes and placing them into the design, students then sealed the project together with epoxy. Two weeks after applying epoxy of varied colors, students squared off the projects using a table saw. Student Karter Carpenter said, “The tools I was most interested to learn were the band saw and the table saw. I want to continue woodworking and learn to build things like tables, chairs, and cabinets.”

“This geometric wood epoxy project requires math, science, and art skills.” Rocque said, “This helps students gain problem solving and decision

making skills which will help them later in life.” Rocque's project utilized geometry, measuring, woodworking, and principles of manufacturing.

“Students learned to mass produce one shape multiple times, as well as the skill of plastic forming,” she said, adding that the concept of conserving materials and patience is taught in the epoxy stage of the project. Eighth grade student Abbey Graff said, “The coolest thing I learned was to use epoxy. It was fun and exciting, and turned out really cool”

“We want to emphasize universal skills students need across all career sets, such as the ability to problemsolve and work together as a team,” Paquette said. Rocque adds, “Seeing the pride students have once the product is finished, is super rewarding.”

Student Nathan Sebero enjoyed learning more about coding and liked how his wood epoxy project turned out. “I see myself working in the trades or manufacturing,” he said.

SUBSCRIPTION TERMS

An EZ-Pay (Auto-Renew) subscription is considered a CONTINUOUS SUBSCRIPTION, which means it will automatically renew at the end of the initial term. Notice of cancellation must be provided before the end of this SUBSCRIPTION TERM to avoid charges for an additional term. Future SUBSCRIPTION TERM prices and publication days are subject to change. This subscription grants you a FULLY PREPAID, NON-REFUNDABLE license

to receive and access the subscription materials for the duration of the subscription term. PRE-PAYMENT: if you choose the convenience of prepay, price changes, premiums and/or surcharges during the pre-payment term may apply, this could reduce or extend the pre-payment term. We reserve the right to issue refunds or credits at our sole discretion. If we issue a refund or credit, we are under no obligation to issue the same or similar refund

or credit in the future. All subscriptions will automatically include up to six premium content editions, there will be a charge for these premium editions, which will shorten the length of your subscription. The publisher reserves the right to change subscription rates during the term of any subscription. A Maintenance fee may be added to subscriptions to accommodate for increased production expenses during the year.
